sundramsinghal944@gmail.com | LinkedIn | LeetCode | GitHub

SUMMARY

B.Tech CSE graduate (2026) specializing as a Software Engineer with a core focus on Backend Development. Strong technical proficiency in Java 17, Spring Boot 3, Microservices Architecture, Apache Kafka, and Redis. Solid problem-solving foundation in Data Structures & Algorithms with a dedicated engineering focus on building low-latency event-driven pipelines, distributed idempotency, and ACID-compliant transactional systems. Available for Immediate Joining.

EDUCATION

B.Tech in Computer Science & Engineering, Lloyd Institute of Engineering & Technology — 2022 – 2026
Greater Noida, Uttar Pradesh — CGPA: 8.2/10

SKILLS

Languages	Java (Core Java, Java 8, Java 17), C++, SQL, JavaScript
Frameworks & Core	Spring Boot 3, Spring Data JPA, Hibernate ORM, RESTful APIs, Microservices
Distributed Systems	Apache Kafka, Redis (Distributed Caching, Atomic SETNX Locks)
Databases	PostgreSQL, MySQL, ACID Transactions
DevOps & Tools	Docker, Docker Compose, Git, GitHub, Maven, Postman, JUnit 5

EXPERIENCE

Step2gen Technologies — Jan 2026 – Jun 2026
Software Trainee — *Mohali, Punjab*

- Developed modular backend components and RESTful APIs, focusing on Object-Oriented Design, relational database modeling, and clean architectural principles.
- Designed and delivered backend module assignments under strict 24–48 hour sprint deadlines, applying SOLID principles, Clean Architecture, and Dependency Injection.
- Implemented relational database schemas and optimized SQL queries, incorporating server-side input validation and structured error handling across transactional workflows.
- Followed industry-standard engineering workflows, including Git version control, branch management, peer code reviews, and API testing via Postman.

PROJECTS

ZeroMesh-UPI - Offline Mesh Payment System **Live** — **GitHub**

- Built a fault-tolerant offline payment system using Java 17, Spring Boot, Apache Kafka, Redis, and PostgreSQL to enable transactions in network dead zones.
- Engineered an ad-hoc Bluetooth Mesh Gossip Protocol with TTL-based hop decay and end-to-end Hybrid Cryptography (RSA-2048 + AES-256-GCM) for tamper-proof peer-to-peer relay.
- Implemented a 4-stage ingestion gateway with Redis SETNX (25h TTL) distributed locks for sub-millisecond deduplication, preventing replay attacks across multi-bridge flushes.
- Designed an asynchronous settlement pipeline via Kafka KRaft, enforcing atomic PostgreSQL ACID transactions with JPA `@Version` optimistic locking to prevent double-spending.

CERTIFICATIONS

- Forage Advanced Software Engineering Job Simulation (Apr 2025) LINK
- GeeksforGeeks Data Structures & Algorithms with C++ (Jun 2025) LINK

ACHIEVEMENTS

- Solved 500+ Data Structures and Algorithms problems across LeetCode, GeeksforGeeks, and Coding Ninjas.
- Ranked among the Top 5 students of Lloyd Institute of Engineering & Technology on GeeksforGeeks.
