Dear Hiring Team,

I am writing to express my strong interest in joining your engineering organization as a Backend Developer / Software Development Engineer (SDE-1). I am a B.Tech graduate in Computer Science and Engineering from Lloyd Institute of Engineering & Technology (Batch 2022–2026, CGPA: 8.21 / 10). With hands-on expertise in architecting fault-tolerant distributed systems, production-oriented training across enterprise backend frameworks, and a rigorous Data Structures & Algorithms foundation, I am eager to contribute immediately to building high-performance, resilient software solutions for your team.

Driven by deep interest in distributed architectures and low-latency systems, I engineered ZeroMesh-UPI—an enterprise-grade offline distributed payment system designed to execute secure transactions in network dead zones. Built on Java 17, Spring Boot 3, Apache Kafka (KRaft), and Redis, the platform incorporates an ad-hoc Bluetooth Mesh Gossip Protocol with TTL decay and RSA-2048 + AES-256-GCM hybrid cryptography for secure peer-to-peer relay. To ensure complete consistency, I designed an ingestion pipeline utilizing Redis SETNX distributed locking for atomic sub-millisecond deduplication and asynchronous transaction settlements backed by PostgreSQL ACID transactions with JPA @Version optimistic locking to prevent double-spending.

During my tenure as a Software Trainee at Step2gen Technologies, I completed structured, milestone-driven software engineering modules under strict 24–48 hour sprint deadlines. I developed modular RESTful APIs and optimized relational database schemas applying SOLID principles, Clean Architecture, and Dependency Injection, while passing rigorous mentor code evaluations and utilizing Git workflows and Postman API contract testing. Complementing this backend rigor, I recently completed the 6-Day AWS DevOps Implementation Track through Nextwork, configuring IAM policies, EC2 infrastructure, CodeArtifact repositories, CodeBuild pipelines, and automated multi-stage CI/CD delivery workflows.

My software development practices are grounded in a disciplined problem-solving foundation. I have solved 500+ Data Structures and Algorithms problems across LeetCode and GeeksforGeeks, and secured Institute Rank #3 on GeeksforGeeks. This analytical training enables me to write clean, time- and space-efficient code, understand algorithmic bottlenecks, and approach complex distributed system challenges with a first-principles, logic-driven mindset.

I am an immediate joiner, open to on-site, hybrid, or remote opportunities, and flexible to relocate anywhere across India. You can explore my live interactive portfolio and verified architecture proofs at sundram-ai-portfolio.vercel.app. I would welcome the opportunity to discuss how my technical proficiencies, problem-solving abilities, and proactive engineering approach can add measurable value to your upcoming projects.

Thank you for your time and consideration.

Sincerely,
Sundram Singhal
