# SUNDRAM SINGHAL

+91 7906389315 | Greater Noida, UP
sundramsinghal944@gmail.com | Portfolio | LinkedIn | LeetCode | GitHub

## SUMMARY

B.Tech CSE Graduate (2026) specializing in Backend Engineering and Distributed Systems. Hands-on experience in building scalable microservices with Java 17, Spring Boot 3, Apache Kafka, Redis, and AWS CI/CD automation. Strong foundation in Data Structures & Algorithms. Available for Immediate Joining.

## EDUCATION

**B.Tech in Computer Science & Engineering**, Lloyd Institute of Engineering & Technology — 2022 – 2026
Greater Noida, Uttar Pradesh — CGPA: 8.21

## SKILLS

| | |
|---|---|
| **Languages** | Java (Java 8, Java 17), C++, SQL, JavaScript |
| **Frameworks & Core** | Spring Boot 3, Spring Data JPA, Hibernate ORM, RESTful APIs, Microservices |
| **Distributed Systems** | Apache Kafka (KRaft), Redis (Distributed Caching, Atomic SETNX Locks) |
| **Cloud & DevOps** | AWS (IAM, EC2, CodeBuild, CodeArtifact, CI/CD Pipelines), Docker, Docker Compose |
| **Databases & Tools** | PostgreSQL, MySQL, Git, GitHub, Maven, Postman, JUnit 5, Mockito |

## EXPERIENCE

**Step2gen Technologies** — Jan 2026 – Jun 2026
*Software Trainee* — *Mohali, Punjab*

- Developed modular backend components and RESTful APIs, focusing on Object-Oriented Design, relational database modeling, and clean architectural principles.
- Delivered backend module assignments within strict 24–48 hour sprint deadlines, adhering to SOLID principles, Clean Architecture, and Dependency Injection.
- Implemented relational database schemas and optimized SQL queries, incorporating server-side input validation and structured error handling across transactional workflows.
- Followed industry-standard engineering workflows, including Git version control, branch management, mentor code evaluations, and Postman API contract testing.

## PROJECTS

**ZeroMesh-UPI - Offline Mesh Payment System** Live — GitHub

- Built a fault-tolerant offline payment system using Java 17, Spring Boot, Apache Kafka, Redis, and PostgreSQL to enable transactions in network dead zones.
- Engineered a Bluetooth Mesh Gossip Protocol with TTL decay and RSA-2048 + AES-256-GCM Hybrid Cryptography for secure peer-to-peer relay.
- Implemented a 4-stage ingestion gateway using Redis SETNX distributed locks for atomic deduplication and replay attack prevention across flushes.
- Designed an asynchronous settlement pipeline via Kafka KRaft, enforcing atomic PostgreSQL ACID transactions with JPA `@Version` optimistic locking to prevent double-spending.

## ACHIEVEMENTS & CERTIFICATIONS

- Solved 500+ Data Structures and Algorithms problems across LeetCode and GeeksforGeeks.
- Ranked #3 across the entire institute on GeeksforGeeks.
- AWS Cloud DevOps Implementation Track (Nextwork) — CI/CD Pipeline Automation — LINK
- Forage Advanced Software Engineering Simulation — LINK
- GeeksforGeeks Data Structures & Algorithms with C++ — LINK
